

**Math 811**

**Reflection #1**

**Name:** \_\_\_\_\_

- 1) In three sentences or more describe the main concepts and ideas covered so far in the class.  
(What have you studied in this book so far?)

- 2) Choose and rewrite one problem (and its solution) that you think summarizes the most important concept/idea the best.

- 3) Write a problem from your book that you learned something from and explain what you learned from it.  
OR if none of the problems in the book taught you anything, write a problem related to the book material that would challenge you.

- 4) Write and solve a problem from your book that you did incorrectly at first then learned how to do correctly OR a problem that you still have a question on. Explain what you learned about how to do it correctly OR explain what your question is.
