

1. The table below shows different input and output values for the equation  $y = \frac{2}{5}x + 4$ .

		+5	+5	+5	+5	
$x$	-10	-5	0	5	10	
$y = \frac{2}{5}x + 4$	0	2	4	6	8	
		+2	+2	+2	+2	

- (a) Use the table to plot the graph of this formula .  
 (b) Note that the table shows the rates at which the input and output values change. Indicate these changes (using arrows) on your graph.

$m = \frac{2}{5}$

2. Use the table below to answer the following questions.

- (a) What is the slope of the line that connects these points?

$m = \frac{7}{4}$

- (b) What is the equation of the line that contains these points?

$m = \frac{7}{4}$   
 $y\text{-int: } (0, 5)$

$y = \frac{7}{4}x + 5$

		+4	+4		
$x$	-8	-4	0	4	8
$y$	-9	-2	5	12	19
		+7	+7		

3. (a) Assuming the table below describes a linear function, complete the table.

		+3					
$x$	-7	-4	-1	2	5	8	11
$y$	13	9	5	1	-3	-7	-11
		-4	-4	-4	-4		

- (b) Find the slope of this line.

$m = -\frac{4}{3}$

4. Use the graph of the line below to answer these questions.

- (a) What is the  $y$ -intercept?

$(0, -2)$

- (b) Complete the table using points from the graph.

$x$	-8	-4	0	4	8
$y$	-8	-5	-2	1	4

- (c) What is the slope of this line and how did you find it?

$m = \frac{3}{4}$

- (d) Write the equation of the line.

$m = \frac{3}{4}$   
 $y = \frac{3}{4}x - 2$

5. Use the graph shown on the right to do the following.

(a) Graph the line that passes through the point  $(-6, -5)$  and has a table where the  $y$  values increase by 2 as the  $x$  values increase by 3.

$$m = \frac{2}{3}$$

(b) Use your graph to estimate the  $y$ -intercept.

$$(0, -1)$$

(c) Write the equation of the line.

$$y = \frac{2}{3}x - 1$$

6. Use the graph shown on the right to do the following.

(a) Graph the line that passes through the points  $(-7, 8)$  and  $(5, -2)$ .

(b) Use your graph to determine the slope of the line.

$$m = \frac{-10}{12} = -\frac{5}{6}$$

(c) Use your graph to estimate the  $y$ -intercept.

$$(0, 2)$$

(d) Write the equation of the line.

$$y = -\frac{5}{6}x + 2$$

(e) Is the  $y$ -intercept you estimated exactly right or only an approximation? How do you know?

ONLY AN APPROXIMATION. USING SLOPE FROM  $(-7, 8)$  THE NEXT POINT IS  $(-1, 3)$  AND THEN  $(5, -2)$ . IF  $(0, 2)$  WERE ON THE GRAPH, THE SLOPE WOULD HAVE GOTTEN THAT POINT.

7. Sketch the graph of a line with 0 slope.

$$m = 0$$

8. Describe the slope of the line,  $\ell$ , graphed to the right.

INFINITELY LARGE  
(UNDEFINED)  
eg.  $(\frac{1}{0})$

9. Hurts Rent-a-car charges \$24/day for an economy car rental and an additional \$45 (per rental) for their insurance package. Write a formula giving the cost,  $C$ , of renting a car for  $t$  days.

$$C = 24t + 45$$
