

To incoming students for Math 201 you will find this class more about everyday life than you thought. The topics about Investments, Theory of Voting, Mathematics and Digital Music and various others depending on your interest can be very informative. In looking over the Syllabus try and stay focus on what works best for you from previous classes or your own study habits. Reading the chapter information and lectures notes provided first can be helpful prior to doing assignments as well. You may need to re-read the material for clarity for some subjects but you can also ask your classmates for help on the discussion board and always check in daily for updates. If your schedule allows you can participate in the Virtual classes it can be very helpful and a good place you get questions answered. Because online classes are on your time being mindful of your schedule make sure you can stay ahead or on schedule you will benefit in the long run.

If I had to take this class over I would write clearer notes and more organized notes for the Test like writing the chapter it came from and try to go over material a little each day before the test. I would also read the lecture notes provide for all assignments. Doing the assignments early worked best for me because of my schedule. This is my 5th online class. I like working at my own pace I have more time to do assignments too. I hope this information has been helpful and also don't forget you have help at the learning center also which is one on one. Good luck to you.
