

Dear future math 201 student,

You can expect to learn a lot from this class about real life math problems. A few topics I found particularly interesting were learning about payment plans (since I am buying a car soon) and gambling equations. A few things that helped me succeed in this class were reviewing the virtual classroom meetings and making a good note card for the exams. If I had to take this class over again one thing I would re-do is reviewing my exams before turning them in. I found that the mistakes made on my exams were due to careless mistakes. A couple of habits that worked well for me was using course compass tools to my advantage, asking my professor for help when stuck on a tricky problem, and taking time to review the chapters before a exam. If I had to take another online class I would try to attend more virtual classrooms because they are really helpful and also look at the discussion board more often. All in all, I thought this class was really interesting and I am happy I learned how to solve real life math situations.

Best of luck!
