

General Education (100s)

Who are the students?

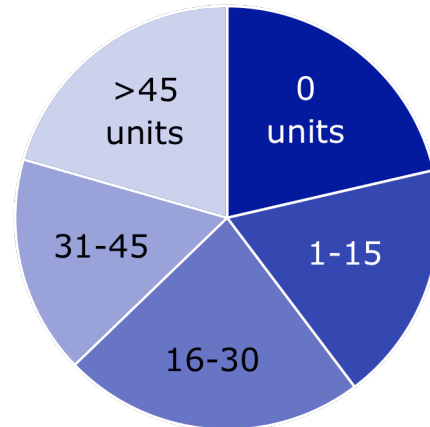

72% plan to transfer:

- SFSU 52%
- Other CSU 24%
- UC 16%
- Other univ. 8%

22% BUS majors

20% undecided

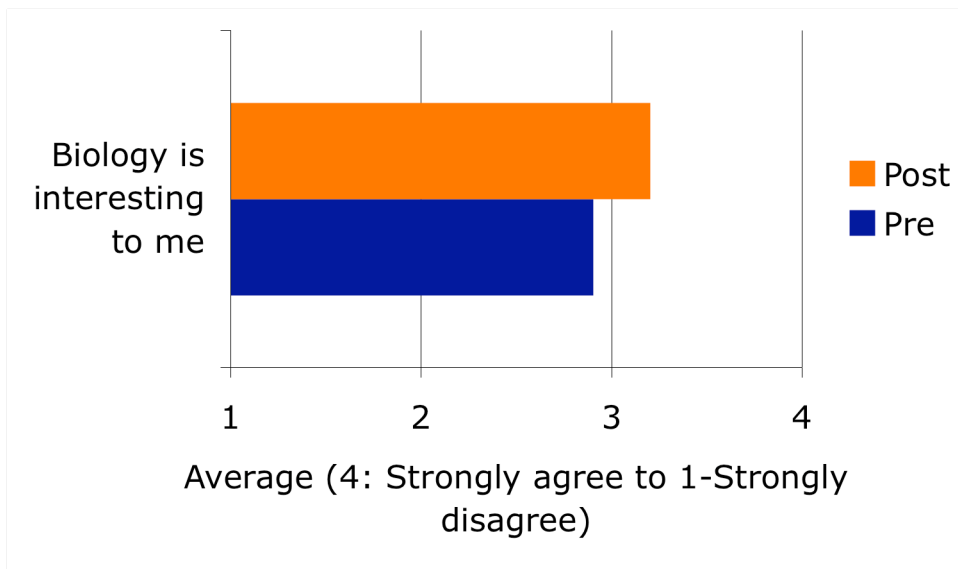

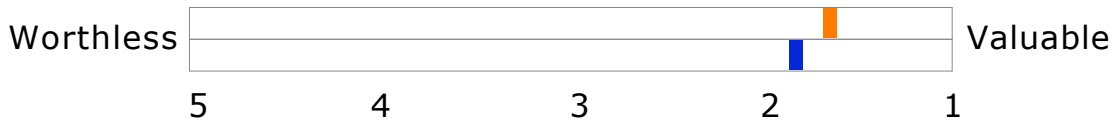

College units: range: 0-120

Based on 1487 pre-course responses and 1056 post-course responses

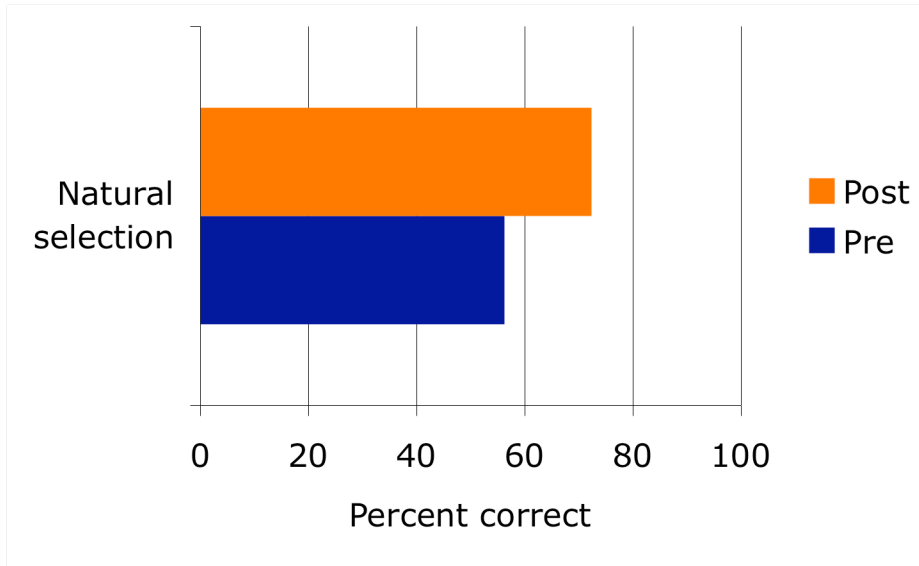

Overall, students had a 10% more favorable response to Biology after their course.

Biology is

28.5% more students correctly identified natural selection after their course. A population of termites initially consists of darkly colored and brightly colored members. After several generations, the termite population consists almost entirely of darkly colored members because the brightly colored termites are easier for a predatory species of insectivores to locate. This situation is an example of

- a. the evolution of a new species.
- b. natural selection.
- c. artificial selection.
- d. adaptive radiation.
