

How to move the “360” Student Desk

Here’s how to roll or rotate your desk and still keep the floors in good shape.

Roll It!

To move your desk to another location:

Lift the seat end of the desk off the floor.

With the weight of the desk on the front wheels only, roll the desk to the desired location (like a wheelbarrow).

Rotate It!

To rotate your desk to a new direction:

Push on the side of the worksurface to start rotation.

Continue to rotate (circular motion) until desk faces the desired direction.

Note: desk has weight-sensitive rollers and must be unoccupied before attempting to roll it or rotate it.

Thank you for your cooperation!
